The Traumatic Brain Injury Model Systems National Database is a prospective, longitudinal multi-center study which examines the course of recovery and outcomes following the delivery of a coordinated system of acute neurotrauma and inpatient rehabilitation. The Database includes large scale follow-up to 20 years post-injury. As of December, 2011 the database contained information on 11,058 persons with TBI. The following are some highlights of the information contained in this database. For further information visit our website at www.tbindsc.org.
