This fact sheet is a quick reference on demographics and the use of services by people with traumatic brain injury (TBI).

The Traumatic Brain Injury Model Systems National Database is a prospective, longitudinal multi-center study which examines the course of recovery and outcomes following the delivery of a coordinated system of acute neurotrauma and inpatient rehabilitation.

The Database includes large scale follow-up to 20 years post-injury. As of December, 2012 the database contained information on 11,772 persons with TBI. For further information, visit our Web site at www.tbindsc.org.

See below for a profile of persons with TBI following treatment and rehabilitation.
For many with TBI, increased independence and reduced need for overnight, part-time, or full-time supervision occurs over time.

Presently there are 16 TBI Model System Centers and 3 TBI Model System Longitudinal Follow-up Centers* sponsored by the National Institute on Disability and Rehabilitation Research, Office of Special Education and Rehabilitative Services, U.S. Department of Education:
