The Traumatic Brain Injury Model Systems

A project funded by the U.S. Department of Health and Human Services
National Institute on Disability, Independent Living, and Rehabilitation Research (NIDILRR)

Data represents database as of 12/31/2020
Project Design

• The first prospective, longitudinal, multicenter study ever conducted which examines the course of recovery and outcomes following the delivery of a coordinated system of acute neurotrauma and inpatient rehabilitation

• Includes large-scale, follow-up to 30 years post-injury
TBIMS is one of three Model Systems programs sponsored by the National Institute on Disability, Independent Living, and Rehabilitation Research (NIDILRR):

- Spinal Cord Injury Model Systems
  » 1970: Established with 14 centers
- Traumatic Brain Injury Model Systems
  » 1987: Established with five centers
  » 1998: Increased to 17 centers
  » Currently: 16 centers and three follow-up centers
- Burn Injury Model Systems
  » 1994: Established with four centers
Conduct research that contributes to evidence-based rehabilitation interventions and clinical and practice guidelines that improve the lives of individuals with traumatic brain injury (TBI).
Requirements of TBIMS Centers

• Clinical Care: Provide a multidisciplinary system of rehabilitation care specifically designed to meet the needs of individuals with TBI, including:
  » Emergency medical services, Level 1 Trauma Center(s)
  » Acute neurosurgical care
  » Comprehensive inpatient rehabilitation services
  » Long-term, interdisciplinary follow-up and rehabilitation services
Requirements of TBIMS Centers

• Knowledge Generation
  – Conduct one or two center-specific studies
  – Participate in at least one multicenter (module) study
  – Collect and submit longitudinal data for inclusion in the TBIMS National Database
  – Optional: Participate with other TBIMS Centers in separately funded NIDILRR collaborative research grants

• Knowledge Translation
  – Collaborate with the Model Systems Knowledge Translation Center (MSKTC) to provide scientific results and information to stakeholders

* Module Studies and Collaboratives Grants
• Characterization and Treatment of Chronic Pain after Moderate to Severe Traumatic Brain Injury
  
  – The aims of this study are to: 1) Determine chronic pain classification, prevalence, location, duration and associations with demographic, injury severity, functioning, and comorbidities; 2) Identify and compare chronic pain extreme phenotype characteristics across two outcomes – impact of chronic pain on daily life and overall perceptions of improvement.; and 3) Identify treatment practices by clinicians who treat comorbid TBI and chronic pain to determine gaps in availability/accessibility of multidisciplinary pain treatment. Cindy Harrison-Felix, PhD (Craig Hospital), Jeanne Hoffman, PhD (University of Washington) and Kimberley Monden, PhD (Craig Hospital) are the Principal Investigators on the study.
TBI is defined as damage to brain tissue caused by an external mechanical force as evidenced by medically documented loss of consciousness or post traumatic amnesia (PTA) due to brain trauma or by objective neurological findings that can be reasonably attributed to TBI on physical examination or mental status examination.
Database Inclusion Criteria

- Moderate to severe TBI (PTA>24 hours or LOC>30 minutes or GCS in ED<13 or intracranial neuroimaging abnormalities)
- Admitted to system’s hospital emergency department within 72 hours of injury
- 16 years of age or older at the time of injury
- Receives acute care and comprehensive inpatient rehabilitation within the model system hospitals.
- Informed consent is signed by patient, family or guardian
Database Objectives

• Aim of the TBIMS National Database (NDB): Generate new and useful knowledge about the short- and long-term outcomes for people with TBI

• Objectives
  – Study the clinical course of individuals with TBI from time of injury through discharge from acute care and rehabilitation care.
  – Evaluate the recovery and long-term outcome of individuals with TBI.
  – Establish a basis for comparison with other data sources.
NIDILRR TBI National Database

• **Method:** Repeated surveys of individuals post injury at regular intervals

• **Form 1:** Inpatient rehabilitation discharge; administered in-person: 285 variables

• **Form 2:** Follow-up conducted 1, 2, 5, and every 5 years thereafter; administered via telephone (primarily), in-person or mail questionnaire; 243 variables
• Form 1 – 18,557 cases (as of 3/31/2021)

• Form 2 – 70,632 follow-ups* – 17% attrition (5%**)
  – Year 1 – 18,286 – 13% attrition (2%**)
  – Year 2 – 16,810 – 14% attrition (4%**)
  – Year 5 – 13,808 – 16% attrition (7%**)
  – Year 10 – 9,059 – 17% attrition (5%**)
  – Year 15 – 4,906 – 17% attrition (9%**)
  – Year 20 – 1,868 – 17% attrition (6%**)
  – Year 25 – 497 – 21% attrition (0%**)
  – Year 30 – 116 – 14% attrition (0%**)

*There are some follow-ups in the database that were performed at 3, 4, and 6 years post-injury.

**Additional percent attrition due to loss of center funding.
TBI NDB Representativeness

- Applicability of TBIMS findings are dependent on the degree to which the TBIMS NDB reflects the larger population of people with TBI
- By definition, the TBI NDB focuses on moderate to severe TBI
- Concern that the TBIMS NDB has a biased sample of cases
- Recent comparison with Uniform Data System for Medical Rehabilitation (UDS) and eRehabData alleviates much of that concern
- Developed ability to weight NDB to represent population of those that receive inpatient rehabilitation to TBI in the US
Study Limitations

• Lack of control or comparison group
• Lack of uniformity in treatment across all Centers
• Attrition in follow-up
• Inability to systematically track post-acute service utilization
• Limited follow-up evaluations if Center defunded
NIDILRR TBI Interagency Database Collaborations

IAAs between Centers for Disease Control and Prevention (CDC) and NIDILRR:

• US population estimates of health and social outcomes 5 years after rehabilitation for traumatic brain injury.

• Epidemiology of adults receiving acute inpatient rehabilitation for a primary diagnosis of traumatic brain injury in the United States.

• Life Expectancy after Inpatient Rehabilitation for Traumatic Brain Injury in the United States.

• Unemployment in the United States after TBI for working-age individuals: Prevalence and associated factors 2 years postinjury.
IAAs between Centers for Disease Control and Prevention (CDC) and NIDILRR (Continued):

• Acute Ischemic Stroke After Moderate to Severe Traumatic Brain Injury: Incidence and Impact on Outcome.
• Moderate to Severe Traumatic Brain Injury is a Lifelong Condition.
• Functional Outcome Trajectories following Inpatient Rehabilitation for TBI in the United States: A NIDILRR TBIMS and CDC Interagency Collaboration.
• One and Five Year Outcomes after Traumatic Brain Injury Requiring Inpatient Rehabilitation.
• Return to Productivity Projections for Individuals with Moderate to Severe TBI following Inpatient Rehabilitation.
IAAs between Department of Veterans Affairs (VA) and NIDILRR (FY2008-2013)

- VA TBI Veterans Health Registry (Congressional mandate)
  - Includes those serving in Operation Enduring Freedom/Operation Iraqi Freedom who exhibit symptoms associated with TBI, and apply for services or file a disability claim.
  - TBIMS National Data and Statistical Center (NDSC), together with VA and NIDILRR, design studies, conduct analyses, and generate reports

- VA Polytrauma Rehabilitation Centers (PRC) Database
  - Includes those admitted to the VA PRCs with a diagnosis of TBI
  - Includes most variables currently in TBIMS NDB; follows TBIMS NDB procedures and data collection schedules
NIDILRR TBI Interagency Database Collaborations (Continued)

Contracts between Department of Veterans Affairs (VA) and NDSC (FY2016-present)

• VA TBI Veterans Health Registry (Congressional mandate)
  – Includes those serving in Operation Enduring Freedom/Operation Iraqi Freedom who exhibit symptoms associated with TBI, and apply for services or file a disability claim.
  – TBIMS National Data and Statistical Center (NDSC), together with VA and NIDILRR, design studies, conduct analyses, and generate reports

• VA Polytrauma Rehabilitation Centers (PRC) Database
  – Includes those admitted to the VA PRCs with a diagnosis of TBI
  – Includes most variables currently in TBIMS NDB; follows TBIMS NDB procedures and data collection schedules
Other NIDILRR TBI Interagency Collaborations

Research-based Initiatives to Advance Treatment/Services

• 3rd Federal Interagency Conference on TBI (Sponsors: NIDILRR, DoD, VA, NIH, CDC and others).

• Guidelines for the Treatment of Disorders of Consciousness post TBI (Sponsors: NIDILRR/American Academy of Neurology/American Congress of Rehabilitation Medicine)

• Guidance for the Acute Diagnosis and Management of Mild Traumatic Brain Injury (mTBI) among Children and Adolescents (Sponsor: CDC)

• Cognitive Rehabilitation for mTBI (Sponsor: DoD)

• Driving evaluations post TBI (Sponsor: DoD)
Consensus Initiatives to Advance Research

- Common Data Elements (CDE) for TBI Research (Sponsors: DoD, NINDS, NIDILRR, DVBIC, VA)
- FITBIR Federated Database (Sponsors: NIH/DoD)
- Report to Congress on Rehabilitation Post TBI (Sponsor: CDC)
- Future Research Needs for Multidisciplinary Postacute Rehabilitation for Moderate to Severe TBI in Adults (Sponsor: AHRQ)
- State-of-the-Science Report on Sports-related Concussions in Youth (Sponsors: IOM & 10 partners, including NIDILRR)
- Cognitive Rehabilitation Therapy Workshop (Sponsor: IOM/DoD)
Peer-Reviewed Publications Have Used the TBIMS NDB

- Epidemiology of moderate to severe TBI
- Natural history of TBI outcomes and comorbidities
- Predictors of TBI outcomes and comorbidities
- Validation of severity and outcome measurement
- Longitudinal change over time
TBIMS Accomplishments (1/7)

- An additional 400-plus peer reviewed publications from TBIMS research include a wide range of topics
  - Patient and injury characteristics
  - Prognostic factors
  - Comorbidities
  - Outcomes research
  - Treatment effectiveness
  - Health service research
• Development of practice parameters in important areas of TBI care
  – Management of post-traumatic seizures
  – Spasticity
  – Post-traumatic agitation
  – Substance misuse
  – Family intervention
  – Driving
• Development of innovative interventions for the acute phase of recovery
  – DVT prophylaxis
  – Amantadine for Disorders of consciousness
  – Amantadine for irritability
  – Adaptation of acute rehab for older adults
  – Care-giver support
  – Telephone follow-up
• Creation of novel diagnostic procedures and measurement instruments
  – Post-traumatic amnesia (O-Log; JFK CRS)
  – Participation (CIQ; PART)
  – Agitation (ABS)
  – Attention (MARS)
  – Disability+ (DRS; MPAI)
  – Neurobehavioral functioning (NFI)
  – Lifetime TBI (OSU-TBI-ID)
TBIMS Accomplishments (5/7)

- O-Log = The Orientation Log
- JFK CRS = Coma Recovery Scale
- CIQ = Community Integration Questionnaire
- PART = Participation Assessment with Recombined Tools
- ABS = Agitated Behavior Scale
- MARS = Moss Attention Rating Scale
- DRS = Disability Rating Scale
- MPAI = Mayo Portland Adaptability Inventory
- NFI = Neurobehavioral Functioning Inventory
- OSU-TBI-ID = Ohio State University TBI Identification Method
• Identification of adverse rehabilitation outcomes common to TBI and associated risk factors
  – TBIMS research has shown longer PTA, unawareness of deficits, depression, substance abuse, fatigue, minority status, older age to be risk factors for worse outcomes
  – TBIMS research has documented mortality risk after TBI

• Characterization of the recovery trajectory in the years following injury
  – Functional independence, satisfaction with life, cognitive abilities, employment, residence, etc. have all been characterized from the TBIMS data in both the initial two years post-injury and now more than a decade post-injury
• Creation of user-friendly, web-based resources for people with brain injury, their caregivers, and professionals
  – Center on Outcome Measurement in Brain Injury (COMBI)
  – TBIMS NDB syllabus
  – MSKTC fact sheets
  – TIRR web-based materials for care-givers

Sources of Data

• Abstract from medical records
• Pre-existing database
• Specialized data collection forms
• Patient examination/interview/testing
• Family interview
Guidelines for Follow-up

• Follow-up contact attempted with every patient 1st, 2nd, 5th years and then every five years.

• 4 month window for year 1 follow-up, 6 month window for year 2, 1 year window for years 5, 10, 15, . . .

• Patient is primary source of follow-up information; if patient cannot be interviewed, follow-up is attempted with a proxy.

• Methods of follow-up in order of priority: phone/in-person, mail questionnaire.
Data Quality Checks

• Data entry screens:
  – Checks for valid codes and correct range
  – Logical checks between variables
  – Consistency checks between variables across time
Data Quality Checks (Continued)

- User-initiated database reports:
  - Identify cases with errors or blanks
  - Notify of follow-ups coming due
  - Warnings about overdue follow-ups
  - Calculate missing data rates
  - Calculate follow-up rates
Internal Dissemination

- Annual Data Summary
- Quarterly Data Quality Reports
  - Enrollment
  - Retention
  - Missing Data
External Dissemination

- Internet [www.tbindsc.org]
  - Online Database Data Dictionary
  - Annually updated TBI Model Systems PowerPoint Presentation
- National/International Presentations
- Journal Publications
Welcome to the NDSC

The Traumatic Brain Injury Model Systems National Data and Statistical Center (TBINDSC) located at Craig Hospital in Englewood, Colorado, is a central resource for researchers and data collectors within the Traumatic Brain Injury Model Systems (TBIMS) program. The primary purpose of the TBINDSC is to advance medical rehabilitation by increasing the rigor and efficiency of scientific efforts to longitudinally assess the experience of individuals with traumatic brain injury (TBI). The TBINDSC provides technical assistance, training, and methodological consultation to 16 TBIMS centers as they collect and analyze longitudinal data from people with TBI in their communities, and as they conduct research toward evidence-based TBI rehabilitation interventions.

Below are links to the TBIMS Presentation and TBIMS Update, which has information about the individual model systems and descriptions of the injury and followup data that are being collected.

The Model Systems Knowledge Translation Center (MSKTC) aims to:

- **Enhance** the relevance and visibility of Model Systems research
- **Communicate** Model Systems research effectively to stakeholders

The MSKTC is operated by American Institutes for Research in collaboration with WETA/BrainLine and George Mason University
Three overarching goals guide the work of the MSKTC:

• **Goal 1**: Enhance the understanding of the quality and relevance of knowledge among researchers and multiple users on the topics of SCI, TBI, and Burn

• **Goal 2**: Enhance knowledge of advances in SCI, TBI, and Burn research among the diverse audience members who need this information

• **Goal 3**: Create a centralized repository of empirical information and resources on research in SCI, TBI, and Burn areas and actively conduct outreach and dissemination activities to communicate this knowledge

Mean = 7.65 days; n = 17833
Duration of PTA

- **8 Thru 28 days (Very Severe)**: 41%
- **1 Thru 7 days (Moderate/Severe)**: 19%
- **<=29 days (Extremely Severe)**: 31%
- **<1 day**: 9%

Mean = 22.32 days; n = 14454
Summary

Causes of Injury

– Primary cause is vehicular (49%), followed by falls (29%) and violence (11%)

Severity of Injury

– Average duration of LOC is 7.65 days
– Average duration of PTA is 22.32 days
Mean Length of Stay

- Acute Care
- Rehab. Care

Summary

Costs of Treatment

– Total length of stay (LOS) has decreased over the last 10 years for rehab.
– Total acute LOS in 2020 has remained fairly stable over the last 5 years.
– Total rehab LOS in 2020 represents the lowest in the past decade.
– Thirty-eight percent have government-sponsored rehabilitation care (Medicaid/Medicare).

Summary

Disability Outcomes

- DRS indicates improvement in level of disability from SEVERE DISABILITY at rehab. admission to PARTIAL DISABILITY at 1 and 2 years post-injury.
- FIM® Instrument indicates improvement in functional ability from level requiring MODERATE ASSISTANCE at rehab. admission to MODIFIED INDEPENDENCE at 1 and 2 years post-injury.
- Most improvement in level of disability and functional ability occurs during inpatient rehabilitation.
- Continued improvement is seen at 1 year post-injury.
- Levels of disability and functional ability appear to plateau between 1 and 2 years post-injury.
Marital Status

- At injury (n=18487):
  - Single: 46%
  - Married: 33%
  - Divorced/Separated: 16%
  - Widowed: 5%

- Year 1 (n=14868):
  - Single: 44%
  - Married: 33%
  - Divorced/Separated: 18%
  - Widowed: 5%

- Year 2 (n=12960):
  - Single: 44%
  - Married: 32%
  - Divorced/Separated: 19%
  - Widowed: 5%
Employment Status

Employed  Unemployed  Student  Retired  Other

61%  12%  6%  3%  18%  29%  26%  5%  4%  36%  32%  21%  5%  4%  38%

Injury (n=18551)  Year 1 (n=14793)  Year 2 (n=12901)
Participation Outcomes

• Most live in a private residence following rehab. discharge (81%).
• Few live alone at rehab. discharge (3%), with the highest proportion living with parent(s) (32%), or spouse/SO (31%).
• Twenty-nine percent are employed at 1 year post-injury (61% employed at injury).
The TBI Model Systems Program:

- Demonstrates a system of care for TBI
- Performs several types of research
  - Several center-specific clinical trials and other types of studies
  - Innovative module (collaborative) studies
  - A comprehensive, longitudinal database containing over 18,000 cases with up to 30 years of follow-up
